Blochem. Blophys. Res. Commun. 183:163-169(1992).

Blochem. Blophys. Res. Commun. 183:163-169(1992).

IN LEUKOCYTE-ENDOTHELIAL CELL ADHESION. INTERACTS WITH THE BETA-1
INTEGRIN VLA4 ON LEUKOCYTES, AND MEDIATES BOTH ADHESION AND SIGNAL
TRANSDUCTION. THE VCAMI/VLA4 INTERACTION MAY PLAY A
PATHOPHYSIOLOGIC ROLE BOTH IN IMMUNE RESPONSES AND IN LEUKOCYTE
EMIGRATION TO SITES OF INFLAMMATION.

SUBCELLULAR LOCATION: Type I membrane protein.

-I TISSUE SPECIFICITY: Expressed on inflamed vascular endothelium, as
well as on macrophage-like and dendritic cell types in both normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-APR-1993 (Rel. 25, Created)

SEQUENCE OF 22-4391 FROM N.A., AND VARIANT SJS1 TYR-1532. MEDLINE=20553141; PubMeder11101850; Nicole S., Davoine C.-S., Topaloglu H., Cattolico L., Bar Beighton P., Ben-Hamida C., Hammouda H., Cruaud C., White Samson D., Urtizberea J.A., Lehmann-Horn F., Weissenbach Hentati F., Fontaine B.; "Perlecan, the major proteoglycan of basement membranes, patients with Schwartz-Jampel syndrome (chondrodystrophic Nat. Genet. 26:480-483(2000).
                                                                                                                               Zhang H., Li X.-J., Martin D.B., Aebersold R.;
"Identification and quantification of N-linked glycoproteins using hydrazide chemistry, stable isotope labeling and mass spectrometry.";
Nat. Biotechnol. 21:660-666(2003).
-!- FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration properties. It serves as an attachment substrate for cells.
-!- SUBUNIT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement
                                                                                                                                                                                                                                                                                                  CARBOHYDRATE-LINKAGE SITE ASN-2121.

                                                                                                 ino acid sequences of two mouse immunoglobulin lambda chains."; c. Natl. Acad. Sci. U.S.A. 68:590-594(1971).
c. Natl. Acad. Sci. U.S.A. 68:590-594(1971).
mISCELLANEOUS: The MOPC 315 cell line produces 2 light chains, normal lambda-2 chain and 1 abnormal lambda-1 chain that is missing a large part of the V region. The C region sequence (sl here) appears completely normal.
sIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                musculus (Mouse)

Basement membrane-specific heparan sulfate proteoglycan
protein precursor (HSPG) (Perlecan) (PLC).
                                                                                                                                                                                                                             Yamada Y., Hassell J.R.;

"Identification of cDNA clones encoding different domains of the basement membrane heparan sulfate proteoglycan.";

J. Biol. Chem. 263:16379-16387(1988).

-!- FUNCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration
                                                                                                                                                                                                                                                                                                                                                                                                                      "The complete sequence of perlecan, a basement membrane heparan sulfate proteoglycan, reveals extensive similarity with laminin A chain, low density lipoprotein-receptor, and the neural cell adhesion

Oncogene 15:691-700(1997).

-i- FUNCTION: May be involved as a regulatory protein in the transition of undifferentiated proliferating cells to their differentiated state. May also function as a cell adhesion molecule in a broad spectrum of embryonic and adult tissues.

-i- SUBCELLULAR LOCATION: Type I membrane protein.

Note=Expression developmentally regulated;
TISSUE SPECIFICITY: widely expressed.
TISSUE SPECIFICITY: widely expressed.
DEVELOPMENTAL STAGE: EXPRESSED UBIQUITOUSLY THROUGHOUT THE MID TO LATE STAGES OF GESTATION AND IN ADULT TISSUES. STRONG EXPRESSION IS OBSERVED IN THE VENTRAL REGION OF THE VENTRICULAR ZONE OF THE E15.5 MOUSE NEURAL TUBE, AS WELL AS IN THE VENTRICULAR ZONES OF THE MESSENCEPHALON AND RHOMBENCEPHALON. ISOFORMS 3 AND 4 ARE EXPRESSED AT HIGHER LEVEL COMPARED TO OTHER ISOFORMS BETWEEN E11.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBCELLULAR LOCATION: Type I membrane process.

"CD22, a B lymphocyte-specific adhesion molecule that regulates antigen receptor signaling.";

Annu. Rev. Immunol. 15:481-504(1997).

-i- FUNCTION: Mediates B-cell B-cell interactions. May be involved in the localization of B-cells in lymphoid tissues. Binds sialylated glycoproteins; one of which is CD45. Preferentially binds to alpha2,6-linked sialic acid. The sialic acid recognition site can be masked by cis interactions with sialic acids on the same cell immune response seems to be involved in regulation of B cell antigen receptor signaling. Plays a role in positive regulation through interaction with Src family tyrosine kinases and may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STALIC ACID BINDING.

PTM: Phosphorylated on tyrosine residues by LYN (By SIMILARITY: Belongs to the immunoglobulin superfamil (sialic acid binding Ig-like lectin) family. SIMILARITY: Contains 6 immunoglobulin-like C2-type d SIMILARITY: Contains 1 immunoglobulin-like V-type do CAUTION: Ref.4 sequence differs from that shown due frameshift in position 806. DOMAIN: Contains 4 copies of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in downmodulation of cellular responses. The phosphorylated ITIM motif binds to the SH2 domain of PTPN6/SHP-1.

PTM: Phosphorylated both on threonine/serine and tyrosine DATABASE: NAME=PROW; NOTE=CD guide CD22 entry; WWW="http://www.ncbi.nlm.nih.gov/prow/cd/cd22.htm". Name=CD22-alpha;
IBOId=P20273-2; Sequence=VSP 002531;
TISSUE SPECIFICITY: B lymphocytes.
DOMAIN: Contains 4 copies of a cytopla Name=CD22-beta; residues SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chen B.L., Poljak R.J.;
"Amino acid sequence of the (lambda)
immunoglobulin (IgG New).";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-74109253;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   n man.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        MISCELLANEOUS: The sequence shown is the Kern-/Oz-/Mcg- chain found in proteins SH, X, and NIG-64. The Kern protein has the Kern the Mcg protein has the Oz+ marker, the Mcg protein has the Oz+ marker, the Mcg protein has the Kern+ marker, and the Mcg+ marker.

MISCELLANEOUS: Six tandem lambda-type genes were identified and the 3 most 5' were sequenced. These correspond to the Mcg sequence the 3 most 5' were sequenced. These correspond to the Mcg sequence (lambda-1), the Kern-/Oz- sequence (lambda-2) and the Kern-/Oz-
                                                                                                                                                                                                                                                                                                                                                                                                        SIMILARITY: Contains 1 immunoglobulin-like domain.
